Enabling PayPal

This document explains how to configure your PayPal account in order to integrate with Secure Trading.

Version: 2.0
Published: 5 March 2014

Enabling PayPal

Secure Trading has integrated with PayPal Express Checkout allowing you to accept PayPal transactions through the Secure Trading gateway. **Please note that this PayPal integration will not work within an iframe.** There are a number of simple steps required to set PayPal up on your Secure Trading account:

Step 1

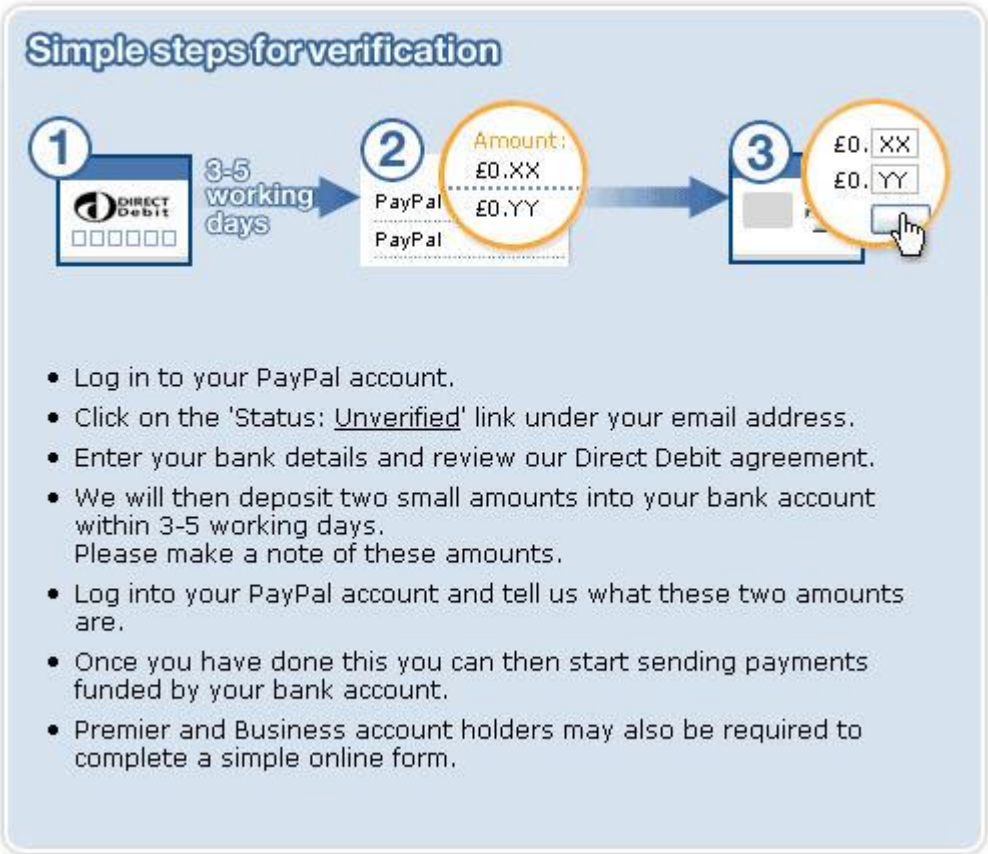
a. Contact your Secure Trading Account Manager to set up PayPal on your account.

b. To add PayPal you will first need to have a PayPal Business Account. If you do not already have a PayPal Business Account, then you can open one by navigating to: https://www.paypal.com/uk/cgi-bin/webscr?cmd=_registration-run-validated&account_type=2&country=GB&cid=MKA6C6QRMXATBQJN

There will be no additional fees for performing PayPal transactions on your Secure Trading account. However, standard PayPal transaction fees will apply.

c. Verify your PayPal account

To get Verified, PayPal asks you to provide your debit or credit card or bank or funding details. They then make sure that you are in control of your bank account or card, which helps to prevent fraud such as identity theft.



For a detailed step-by-step guide on how to verify your PayPal account please navigate to: https://www.paypal.com/uk/cgi-bin/webscr?cmd=xpt/cps/general/GetVerified-outside

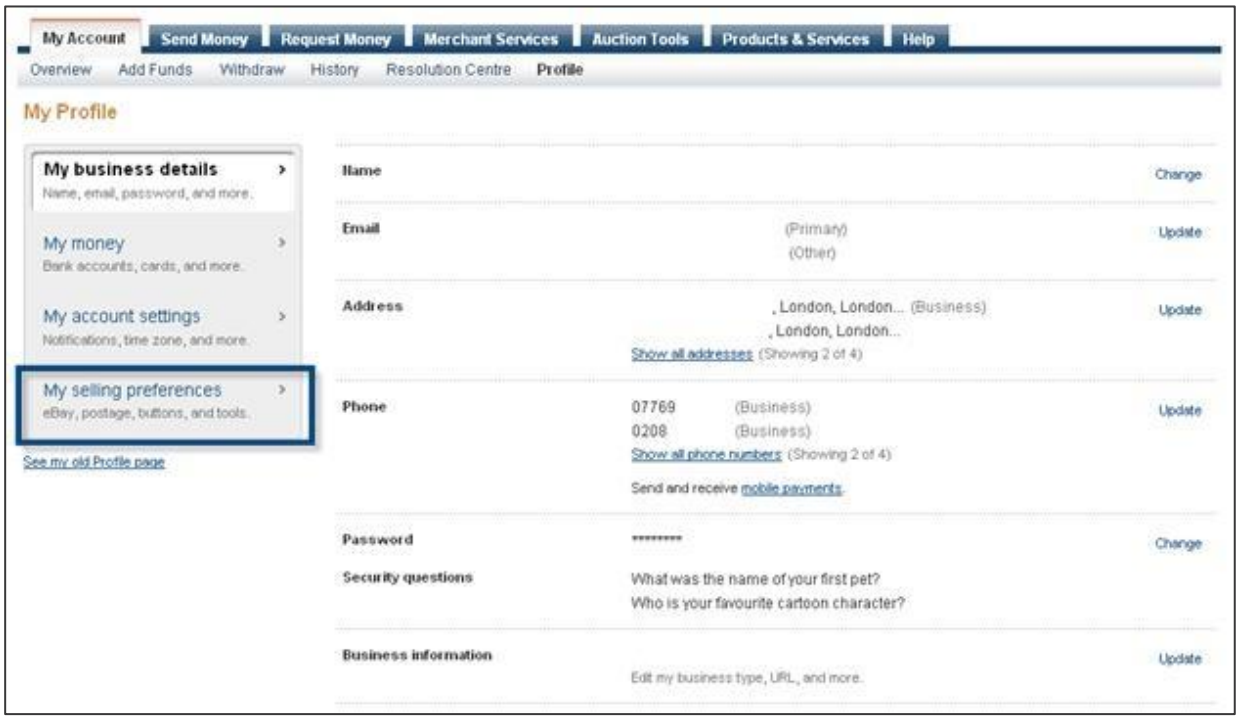
Step 2

Adjust the settings in your PayPal account to accept payments through Secure Trading.

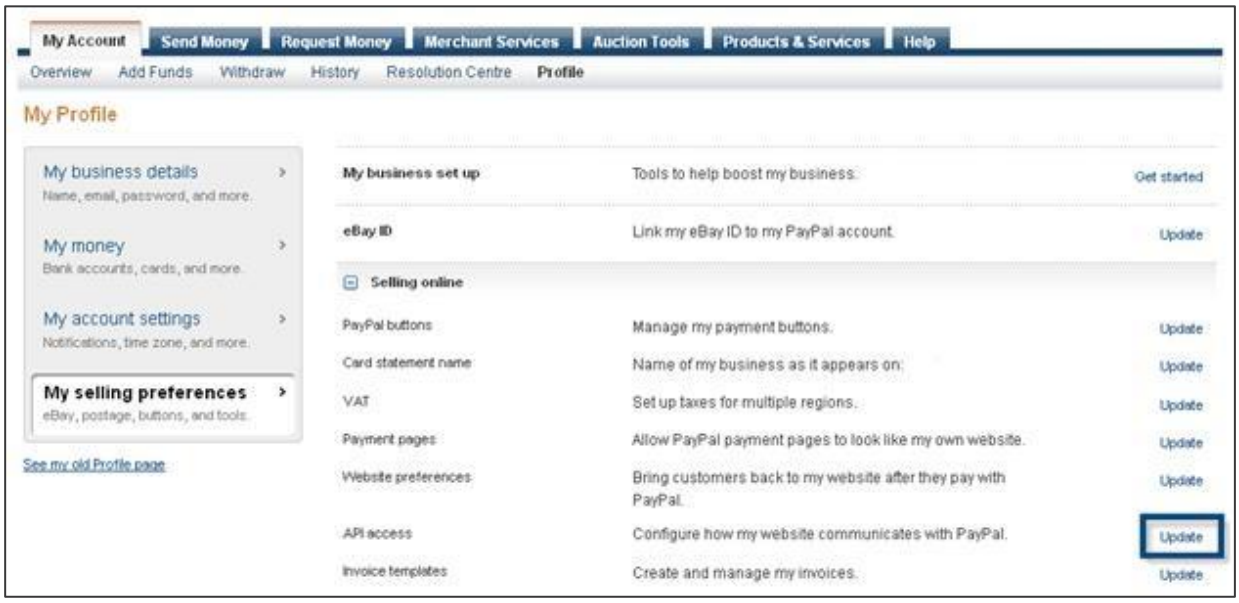
a. Log in to your PayPal account.

b. Once you have logged in select "**Profile**" from the options under "**My Account**".

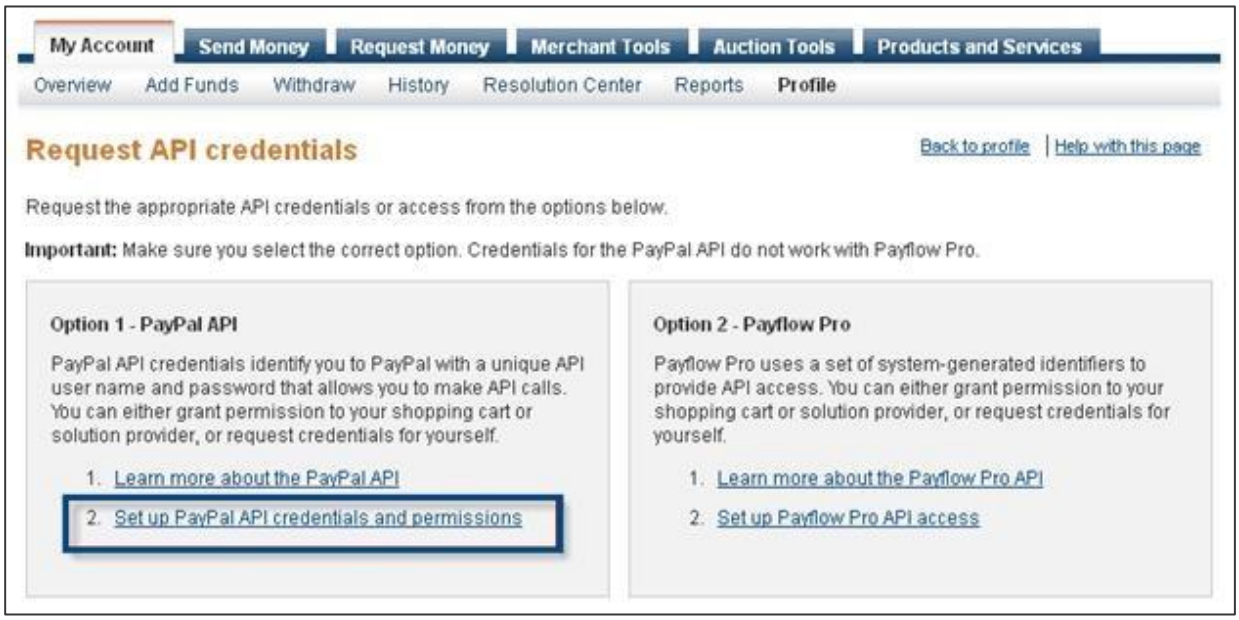
c. Select the "**My selling preferences**" option on the far left hand side of the page.



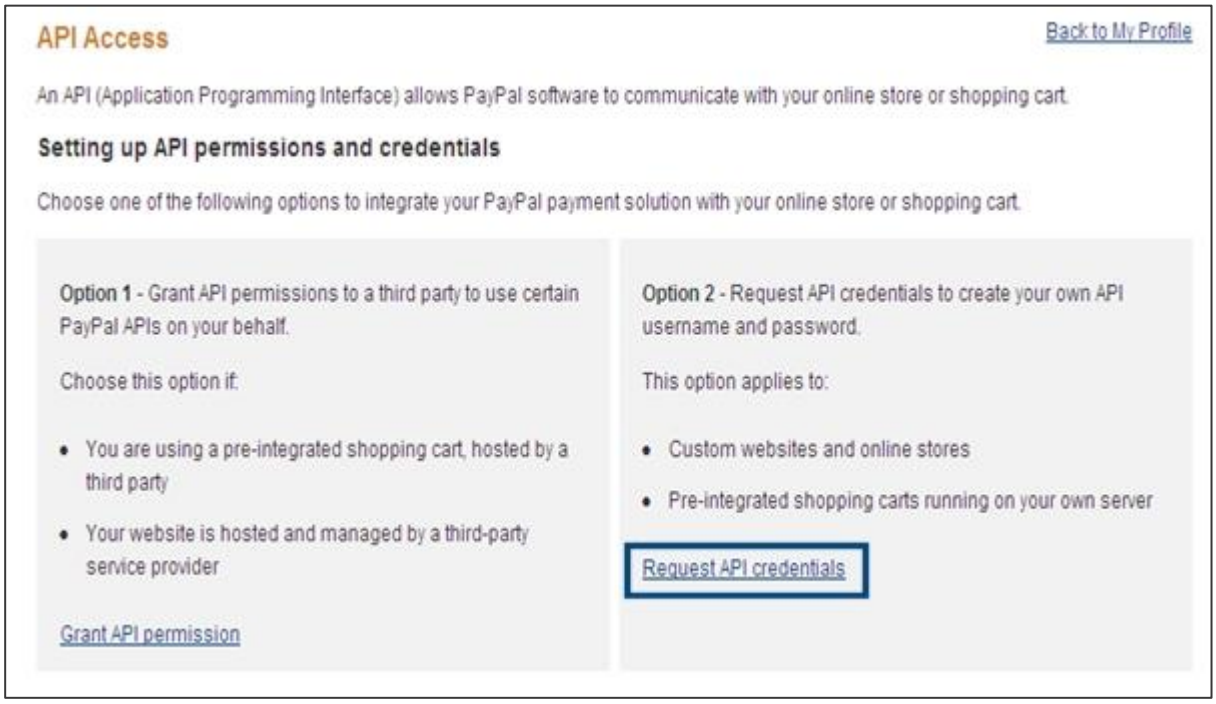
d. Click on "**Update**" for the "API access" option (you may need to expand the "**Selling online**" section first).



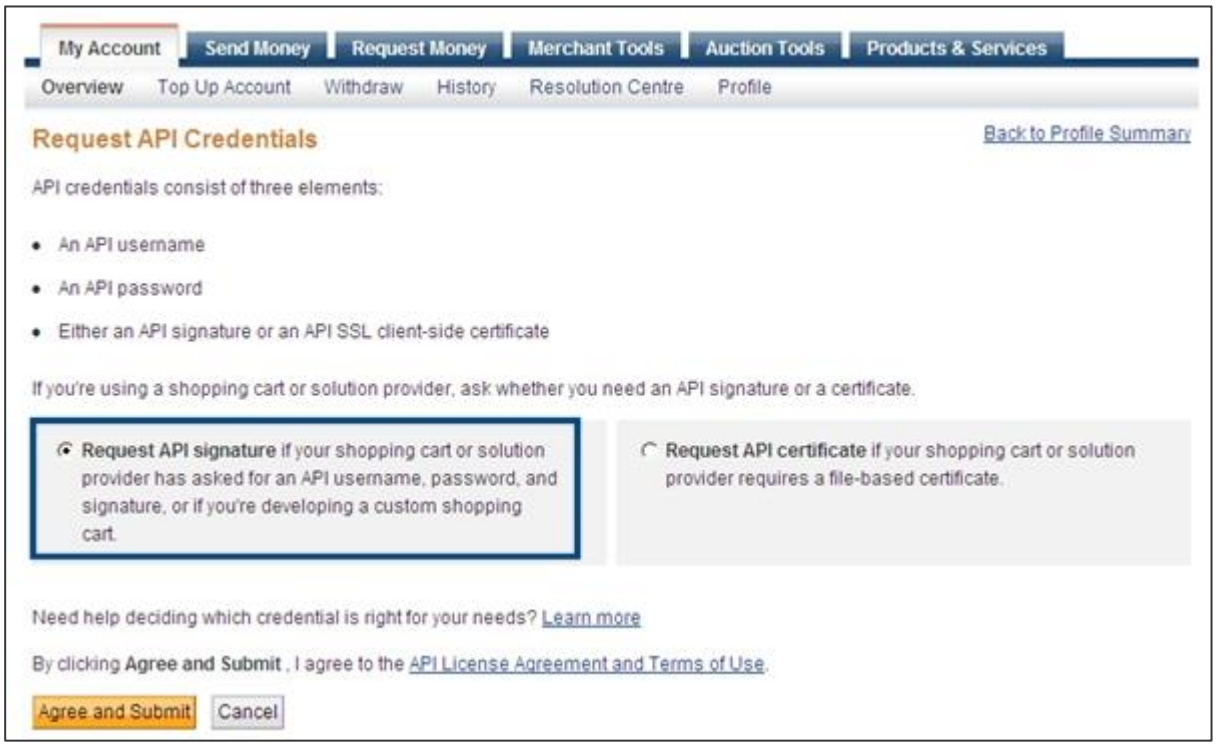
e. Select "**Set up PayPal API credentials and permissions**".



f. Select "**Request API Credentials**"



g. Click on "**Request API Signature**"



h. Click "**Agree and Submit**".

Step 3

Copy and paste the API Name, API Password and Signature details as shown in the example below and send to Secure Trading Support, along with your site reference, to configure your account for PayPal transactions.

If you are using the Secure Trading STPP Payment Pages integration method, the process is complete once Secure Trading Support configures your account.

Secure Trading API and Web Services users will need to configure their systems to submit XML Requests to Secure Trading and to interpret XML Responses. You will need to consult the following documentation:

STAPI User Guide or **Web Services User Guide**
XML Specification
STPP PayPal document

All Secure Trading documents can be found on our website.

Further Information and Support

This section provides useful information with regards to documentation and support for your SecureTrading solution.
